

At Australian Thermal Industries, we take sustainability seriously. Our **Cavi-Break®** product stands as a testament to our commitment to an environmentally conscious and sustainable approach in manufacturing.

Cavi-Break® strips, while high performing, do not compromise our dedication to preserving our environment. They incorporate up to 15% recycled content, reinforcing our commitment to repurposing materials and reducing waste.

In our manufacturing process, we have accomplished a zero-waste policy. Every element used is fully employed, and nothing is discarded as waste, conserving resources, and reducing environmental impact.

The packaging that **Cavi-Break®** comes in is 100% recyclable. We prioritise materials that can be reintroduced into the production cycle, eliminating unnecessary waste, and promoting a circular economy.

The strips themselves are also fully recyclable, echoing our strong commitment to create products that are not only effective but also leave the smallest possible environmental footprint.

No Chlorofluorocarbons (CFCs) or Fluorocarbons, which can be harmful to the environment, are used in the manufacturing process. We take a stand for cleaner production processes and safer products.

Finally, we are mindful of the embodied energy of **Cavi-Break®**. The manufacturing process is designed to minimize the total energy required to produce the product, from sourcing raw materials to the final product, further reducing the environmental impact.

In creating **Cavi-Break®**, our mission has been clear: to deliver superior thermal and condensation management solutions while firmly keeping our sustainability objectives at the forefront. We strive to be part of the solution – for our customers and our planet.
